Ivan Velichko

Fullstack Development, Infrastructure & Management

Saint Petersburg · Remote · project engagements and long-term collaboration

wwr0ngn4m3@gmail.com / Telegram: @wr0ngn4m3

I build web services, accelerate software delivery and keep infrastructure running reliably. I combine fullstack development, DevOps and frontend team coordination, from the user interface to deployment and maintenance. I automate manual operations so teams spend less time on repetitive work and service failures.

01 / EXPERIENCE

Enecuum

March 2020 - April 2023

Fullstack Developer

WORK AND CONTRIBUTION	PRACTICAL IMPACT
ENEX DEX and Web3	
Implemented ENEX DEX Web3 authentication, transaction creation and signing. React/Redux frontend; Express.js and Docker backend.	Delivered the DEX transaction layer, enabling blockchain operations through the product interface.
Analyzed Uniswap and PancakeSwap mechanics for DeFi services.	Established a basis for product and technical decisions informed by existing DeFi service mechanics.
Cross-chain and research	
Designed and tested smart contracts; contributed to the architecture of the Enecuum bridge to Ethereum-like networks.	Contributed to broader Enecuum interoperability by implementing bridge components for Ethereum-like networks.
Developed a distributed VRF PoC with Solidity contracts, consumer contracts and distributed nodes.	Turned a research concept into a software prototype, providing a technical basis for evaluating further development.
Testing and delivery	
Built core network test infrastructure with Node.js, Mocha, MongoDB and PM2; mobile UI tests with UI Automator and Appium.	Reduced repetitive manual testing of the network core and mobile application through automated test scenarios.
Configured GitHub Actions and Docker, maintained test nodes, contributed vulnerability fixes and Telegram interface integration.	Automated test version preparation and provided an environment for change validation and vulnerability remediation.

CodeBurst

December 2023 - August 2025

Fullstack development · frontend coordination · DevOps

WORK AND CONTRIBUTION	PRACTICAL IMPACT
Frontend	
Developed the PaaS frontend with TypeScript, Next.js and SSR.	Delivered the PaaS user interface for service management, connecting frontend workflows to platform functionality.
Coordinated frontend development alongside hands-on interface implementation.	Provided frontend coordination from technical decisions through implementation, combining delivery responsibility with hands-on development.

Ivan Velichko

CodeBurst

WORK AND CONTRIBUTION

Backend integrations and automation

Developed DevOps scripts for cloud and infrastructure operations and backend code integrating them into the platform.

Contributed to shared DevOps work with Kubernetes, Argo CD, Terraform, Ansible and CI/CD.

PRACTICAL IMPACT

Integrated infrastructure automation into the platform backend, replacing recurring manual operations with programmatic workflows.

Established repeatable deployment within shared team infrastructure, reducing reliance on manual execution.

Zoloto585

November 2024 - present

DevOps Engineer · contract engagement

WORK AND CONTRIBUTION

IaC and delivery workflows

Automated e-commerce configuration with IaC and GitLab-triggered deployment; IaC for Grafana and other services.

Built and maintained GitLab CI and Jenkins for Python, .NET and Node.js; contributed Helm chart standards and documentation.

Deployed applications with Helm, maintained Kubernetes and GCP infrastructure and integrated cloud services.

Observability and reliability

Diagnosed backup-related Sentry disk blocking; configured Snuba consumer recovery, monitoring and Grafana alerts.

Deployed SonarQube and automated project synchronization through GitLab and SonarQube APIs.

Maintained centralized ELK logging and service monitoring.

Services, access and protection

Automated StormWall and Qrator Labs interactions; configured monitoring, alerts and documented response procedures.

Integrated LDAP and worked with HashiCorp Vault.

Maintained the existing Harbor registry and administered PostgreSQL, Microsoft SQL Server and MariaDB.

PRACTICAL IMPACT

Reduced configuration deployment time to roughly one-third. Automation replaced manual application associated with errors, repeated deployments and delays of up to 5 minutes.

Standardized build and deployment workflows across 3 technology stacks. Shared pipelines and standards establish a consistent release process.

Provided operational support for applications in Kubernetes and GCP, including deployment and infrastructure service integration.

Eliminated manual Sentry recovery after backup-related failures. Previously, outages occurred roughly twice a week; stable operation has continued since the fix through the present.

Eliminated manual project synchronization between GitLab and SonarQube, reducing administrative work in code quality onboarding.

Centralized access to service diagnostic data, reducing separate log collection during troubleshooting.

Reduced manual operations during DDoS incidents through automated actions and documented response procedures.

Centralized access administration and established secrets management through Vault.

Provided maintenance for the image registry and databases used in application deployment and operation.

Ivan Velichko

LLMOps

July 2026 - present

Project development · LLMOps Engineer

WORK AND CONTRIBUTION

Development and integration

Deployed Open WebUI and Ollama, connected the web interface to models, and configured Angie as the LLM service entry reverse proxy.

Design of Langfuse integration: call tracing, prompt versioning and dataset-based response evaluation. Definition of latency, error and token usage metrics.

PRACTICAL IMPACT

Provided browser-based model access without requiring inference tools on each user's workstation. Model execution and ingress are managed on the service side.

Target outcome: detect regressions before release and diagnose poor responses using traces.

02 / EXPERTISE

Infrastructure and access

Linux, Docker, Kubernetes, Helm, GCP, Yandex Cloud, Terraform, Ansible, HashiCorp Vault, LDAP

CI/CD and automation

GitLab CI, Jenkins, GitHub Actions, Argo CD, Harbor, SonarQube, Python, Bash

Observability

Prometheus, Grafana, ELK, Sentry

Development and data

TypeScript, Next.js, React, Redux, Node.js, Express.js, Solidity, Web3, PostgreSQL, Microsoft SQL Server, MariaDB, MongoDB

03 / EDUCATION

Specialist degree · Information Security

September 2018 - June 2023

Saint Petersburg State University of Aerospace Instrumentation (SUAI)

Information Security of Automated Systems. Degree completed.

Postgraduate study · Information Security

October 2023 - September 2026

Saint Petersburg State University of Aerospace Instrumentation (SUAI)

04 / LANGUAGES

Russian

English **B1**
